ABSTRACT OF THE DISCLOSURE

A composite cellular terminal providing various service options issues different call termination alert tones and different call termination display messages according to types of terminated calls. The cellular terminal sets and stores the call termination alert tones and the call termination display messages according to those service options which are available for the composite cellular terminal. Upon reception of a paging message, If the terminal recognizes the service option contained within the paging message, the terminal then retrieves a call termination alert tone corresponding to the recognized service option and generates the call termination alert tone. The terminal then retrieves a call termination display message corresponding to the recognized service option and displays the read call termination display message. Service options may include a voice call service, an asynchronous data service, a facsimile service, a short message service, a packet data service and a CDPD (Cellular Digital Packet Data) service.
